TECHNICAL SKILLS

Backend-focused Software Engineer with hands-on industry experience building scalable, production-grade systems at Zoho Corporation. Proficient in Java, MySQL, Unix/Linux, and Spring Boot, with strong foundations in data structures, OOP, and full stack development principles. Experienced in REST API design, distributed file systems, performance benchmarking (JMH), and Git-based version control. Eager to bring a proven problem-solving mindset to full stack product development, combining robust backend skills with a growing frontend capability to deliver end-to-end solutions.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), Bash/Shell

Frontend: HTML5, CSS3, React.js (fundamentals), REST API integration

Backend: Spring Boot, MySQL, Distributed File Systems, Unix/Linux

DevOps & Tools: Git, GitLab, IntelliJ IDEA, Eclipse, Visual Studio Code

CS Fundamentals: Data Structures & Algorithms. Object-Oriented Programming (OOP)

Performance & Debugging: Java Microbenchmark Harness (JMH), Production Issue Analysis, Log Debugging

TECHNICAL SKILLS

Zoho Corporation Pvt Ltd | Member Technical Staff (Software Development Engineer)

Apr 2025-Feb 2026 Coimbatore, Tamil Nadu

- Developed and maintained backend systems for log ingestion, processing, and analysis in high-availability production environments.
- Built RESTful backend modules integrating third-party JARs; collaborated cross-functionally through GitLab code reviews.
- Engineered a log retrieval system over a Distributed File System (DFS) with server/cluster-level feature mapping and automated ZIP upload for data access.
- Designed and implemented rsyslog parsing pipelines for multiple log types, improving system observability and debugging efficiency.
- Built log throttling mechanisms and real-time user notification system to prevent production overload from excessive log generation.
- Performed Java performance benchmarking using JMH and resolved critical production bottlenecks.

TECHNICAL SKILLS

- Identified and resolved a critical 7-year-old data loss bug in the raw log retrieval system where server crashes caused duplicate thread spawning on the same log file in DFS, resulting in missed logs post-restart — fixed by implementing a thread-state validation condition to prevent duplicate reads.
- Responded to a data security incident involving an unauthorized 45TB log download request from an admin server - optimized the log retrieval architecture by introducing multi-server parallel thread distribution to split large log files into smaller chunks, significantly reducing download time and improving system response to large-scale data requests.

TECHNICAL SKILLS

- **B.E.- Biomedical Engineering:** KIT - Kalaignarkarunanidhi Institute of Technology, Coimbatore 2021 - 2025) CGPA: 8.65
- **HSC:** PSG Sarvajana Higher Secondary School, Coimbatore (2020-2021) Percentage: 88.5
